MD. ROCKIBUL ISLAM KHAN

Senior DevOps & Cloud Platform Engineer

Dhaka, Bangladesh | rockibul.islam20@gmail.com | +880 1551-806344 | linkedin.com/in/rocky7139 | github.com/rocky000 | rockibul.info

PROFESSIONAL SUMMARY

Senior DevOps & Cloud Platform Engineer with 7+ years of experience building and operating business-critical infrastructure on AWS for healthcare and restaurant SaaS platforms. Beyond infrastructure, brings rare full-stack capability — having sole-owned the design, development, and production deployment of real-time systems (WebSocket/Webhook), an internal support portal, and admin tooling for restaurant POS platforms. Deep expertise in Kubernetes (EKS), CI/CD automation (Jenkins, GitHub Actions), Infrastructure as Code (Terraform, Ansible), serverless architecture (AWS Lambda, EventBridge), and automated code quality pipelines (ESLint, SonarQube, CodeQL). Proven track record of driving cloud cost optimization, enforcing HIPAA compliance, and delivering systems that are live in production across 30+ restaurant brands.

TECHNICAL SKILLS

Cloud: AWS EC2, S3, RDS, VPC, IAM, ALB, Auto Scaling, CloudWatch, EKS, Lambda, EventBridge, CloudTrail, SNS

Containers: Kubernetes, Docker, Helm Charts, EKS, ECS

CI/CD: Jenkins, Jenkins Shared Libraries, GitHub Actions, Slack Integration, Microsoft Teams Integration

Serverless: AWS Lambda, Amazon EventBridge, CloudTrail, SNS

Code Quality: ESLint, Prettier, KarmaJS, SonarQube, CodeQL

Real-Time: WebSocket, Webhooks, REST APIs

Infrastructure as Code: Terraform, Ansible

Observability: Elasticsearch, Logstash, Kibana, Prometheus, Grafana, PagerDuty

Databases: PostgreSQL, MySQL, MongoDB

Programming: Bash, Python 3, Node.js, JavaScript, React

Security: HIPAA Compliance, Nginx, K8s Network Policies, Secrets Management

Practices: Agile / Scrum, Full-Stack Development, Linux Administration, Cost Optimization

PROFESSIONAL EXPERIENCE

Senior DevOps & Cloud Platform Engineer

Katria Bangladesh Limited | Dhaka, Bangladesh | Jul 2024 – Present

- Architected and operate the organization-wide Jenkins CI/CD platform including a reusable Shared Library framework adopted by all development teams, cutting new pipeline setup time by ~60%.
- Deployed a centralized ELK logging platform aggregating logs across all production services, reducing mean time to diagnose incidents from hours to minutes.
- Reduced AWS infrastructure costs by ~20% through EC2 rightsizing, Reserved Instance purchasing, and S3 lifecycle policy optimization.
- Built end-to-end Slack-to-Jenkins deployment automation via slash commands and webhook notifiers, eliminating manual deployment coordination across teams.
- Implemented Grafana + Prometheus monitoring with custom dashboards and alerting, enabling proactive incident detection before user impact.
- Automated weekly database and server backup pipelines to S3 with validation, meeting RPO < 24h and RTO < 4h targets for business continuity.

- Codified all infrastructure using Terraform and Ansible, enabling repeatable, auditable provisioning and disaster recovery drills.
- Built a serverless AWS Lambda–based notification system using CloudTrail + EventBridge to detect and alert on IAM user changes, service events, and security anomalies in real time via Microsoft Teams.
- Extended the Lambda notifier to deliver CI/CD pipeline status updates to Microsoft Teams, giving all stakeholders live build and deployment visibility without accessing Jenkins directly.
- Engineered an automated GitHub code review pipeline enforcing quality and security across frontend (ESLint, Prettier, KarmaJS) and backend (SonarQube, CodeQL) on every pull request — reducing manual review cycles and catching vulnerabilities pre-merge.
- Designed and built the Katria Support Portal end to end (UX, frontend and backend): a live request log refreshing every second, incidents grouped by who should act, and an Error Guide of 40 known errors with fixes.
- Designed and shipped a real-time POS notification system (WebSocket + Webhook) currently live in production — sole owner of frontend, backend, and DevOps; delivers instant alerts to restaurant POS terminals across all brands with sub-second latency.
- Extended the POS notification engine into a targeted POS screen blocker allowing admins to broadcast emergency messages to a specific screen, a single restaurant, an entire chain, or all locations simultaneously.
- Built POS changelogs: admins publish release notes once, targeted to POS, Admin or both, and they are pushed over WebSocket into the notification bell on every POS in real time.
- Built a menu image upload & management pipeline with in-browser cropper UI and direct-to-S3 upload, enabling restaurant teams to manage item images through admin UX without engineering involvement.
- Mentored and upskilled 10+ developers on DevOps practices, AWS cloud management, and deployment best practices.

DevOps Engineer II

Infolytx Limited | Dhaka, Bangladesh | Mar 2019 – Jun 2024

- Managed production and development Kubernetes clusters on AWS EKS supporting a HIPAA-regulated healthcare platform serving thousands of patients daily.
- Enforced HIPAA compliance within Kubernetes environments — implemented network policies, secrets management, pod security policies, and full audit logging.
- Containerized 15+ legacy and greenfield applications using Docker and packaged them as Helm charts for versioned, reproducible deployments.
- Designed highly available, fault-tolerant AWS architectures (EC2, RDS Multi-AZ, VPC, ALB, Auto Scaling) achieving 99.95% platform availability over 5 years.
- Developed reusable Terraform IaC modules for VPC, EKS, RDS, and IAM — reducing infrastructure provisioning time from days to under 2 hours.
- Administered and performance-tuned PostgreSQL and MySQL databases including query optimization, replication setup, and automated backup strategies.
- Built Ansible configuration management playbooks eliminating manual configuration drift across 50+ server fleet nodes.
- Evolved the Prometheus + Grafana observability stack with SLO-aligned dashboards and PagerDuty alerting integration, reducing on-call noise by 40%.
- Supported restaurant SaaS and multi-tenant platform infrastructure across 30+ brands, coordinating deployments in Agile sprints using Jira and GitHub.

KEY PROJECTS

Katria Support Portal — production logs support can actually read

Support needed to know why a POS request failed without digging through raw logs or waiting on an engineer. I designed and built the portal end to end — UX, frontend and backend. It turns logs into answers: problems in one click, incidents split by who should act, and an Error Guide that tells support what to say to the client.
Technologies: UX design, Frontend, Backend, Role-based access

Changelogs that reach every POS

New features shipped, but the people at the till never heard about them. Now an admin writes a changelog once, picks who should see it, and it's pushed over WebSocket into the bell on every POS — in real time, no refresh.
Technologies: WebSocket, Node.js, React, AWS

Real-Time POS Notification System

Sole owner of design, development, and deployment of a WebSocket + Webhook-based notification platform delivering real-time alerts to restaurant POS terminals. Responsible for the full stack: Node.js backend, React frontend, and AWS infrastructure. Currently running in production across 30+ restaurant brands.
Technologies: WebSocket, Webhooks, Node.js, React, AWS

POS Screen Blocker — Admin Emergency Broadcast

Extended the real-time notification system to support targeted screen takeover: admins can push full-screen emergency messages to a specific POS terminal, a single restaurant, an entire chain, or all locations at once, and the POS stays locked until staff confirm.
Technologies: WebSocket, Admin UX, Targeting Engine

Enterprise Jenkins Shared Library Framework

Designed and built a centralized Jenkins Shared Library used by all development teams, standardizing CI/CD pipelines across the organization and reducing pipeline creation time by ~60%.
Technologies: Jenkins, Groovy, CI/CD

AWS Lambda Real-Time Security & CI/CD Notifier

Built a serverless notification system using AWS Lambda, CloudTrail, and EventBridge to detect IAM user changes, AWS service events, and security anomalies — delivering instant alerts to Microsoft Teams. Extended the same pipeline to push live CI/CD build and deployment status notifications.
Technologies: Lambda, EventBridge, CloudTrail, MS Teams

Centralized ELK Logging Platform

Implemented an organization-wide ELK stack (Elasticsearch, Logstash, Kibana) for centralized log aggregation and real-time search across all services, reducing incident diagnosis time from hours to minutes.
Technologies: Elasticsearch, Logstash, Kibana

Automated GitHub Code Review Pipeline

Built a multi-layer code quality gate on GitHub Actions enforcing ESLint and Prettier (frontend), KarmaJS (unit tests), SonarQube (static analysis), and CodeQL (security scanning) on every pull request.
Technologies: GitHub Actions, SonarQube, CodeQL, ESLint

Slack-to-Jenkins Deployment Automation

Integrated Slack slash commands with Jenkins via webhooks to trigger and monitor deployments directly from chat, eliminating manual handoffs and improving deployment visibility for 10+ developers.
Technologies: Slack API, Jenkins, Webhooks

Menu Image Upload Pipeline with S3 & In-Browser Cropper

Designed and built an end-to-end image management flow for admin UX with a browser-side image cropper and direct presigned-URL upload to S3, letting non-technical restaurant staff manage menu item images independently.
Technologies: S3 Presigned URLs, JavaScript, Admin UX

Disaster Recovery & Backup Automation Framework
Built automated weekly backup pipelines for all production databases and servers with S3 uploads and integrity validation, achieving RPO < 24h and RTO < 4h for the organization.
Technologies: Bash, S3, PostgreSQL, MySQL

HIPAA-Compliant Healthcare Infrastructure (Infolytx)
Designed and maintained Kubernetes-based infrastructure for a healthcare SaaS platform with full HIPAA compliance — including network isolation, secrets management, pod security, and continuous audit logging.
Technologies: HIPAA, Kubernetes, Network Policies

EDUCATION

B.Sc. in Computer Engineering
American International University – Bangladesh (AIUB) | 2014 – 2018

H.S.C. in Science
Cambrian College | 2011 – 2013

S.S.C. in Science
Sher-e-Bangla Government Boys' High School & College | 2009 – 2011

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (SAA-C03) — Planned
- AWS Certified DevOps Engineer – Professional (DOP-C02) — Planned
- Certified Kubernetes Administrator (CKA) — Planned
- EC-Council Certified Ethical Hacker (CEH) — Planned

HONORS & AWARDS

1st Place — ACES Project & Thesis Poster Competition | April 2018
Real-Time Smart Traffic Management System — recognized as best project at the annual AIUB Computer Engineering symposium.
